A Lexicon of Scholarly Editing

The Babel of Scholarly Editing

In November 2009, the topic of the annual conference of the European Society for Textual Scholarship was **Texts beyond Borders: Multilingualism and Textual Scholarship** (19-21 November 2009). The logo of the conference was Peter Brueghel the Elder's image of the Tower of Babel, the so-called little version (kept at the Museum Boijmans Van Beuningen in Rotterdam).

At this and following conferences, the need was expressed by several members of ESTS to create a lexicon of scholarly editing similar to undertakings in different disciplines and editorial traditions, and in different linguistic areas, a nice example being the French **Dictionnaire de critique génétique** (edited by Daniel Ferrer, Lydie Rauzier and Aurèle Crasson). Given the divergence of traditions, languages and contexts, such an undertaking is almost 'doomed to fail' from the start – to quote Samuel Beckett.

Towards a Lexicon of Scholarly Editing

But Beckett is also the author of that other quote: 'Fail better.' Under this motto, this lexicon was initiated in November 2012 by the **European Society for Textual Scholarship** (ESTS) and the **Centre for Manuscript Genetics** (part of the research group **Literature and Modernity, University of Antwerp**), as part of ESTS's aim to provide an international and interdisciplinary forum for the theory and practice of textual scholarship in Europe.

Its aim is not to create new definitions, but to gather existing definitions for every entry in the lexicon. Many of these concepts have given rise to lively debates in the past and several eminent scholars have made courageous attempts to define them in monographs or scholarly journals. Every entry will be defined by means of one or more quotations from giants, offering their shoulders to future generations to stand on.

All quotations are referenced and the text from which they derive can be found in the **bibliography**. Although the *lingua franca* of the ESTS and of this lexicon is English, the definitions do not need to be restricted to quotations from articles or monographs in English.

All suggestions for updates are very welcome. New entries or other definitions can be added on the **Contribute** page. New contributions will be presented to the lexicon's editors. Once accepted, new updates to the site will also be added to the **News blog**.

Contribute to the Lexicon!

Without pretending to be exhaustive, this **Lexicon of Scholarly Editing** tries to be as thorough as possible by offering you the opportunity to contribute whenever you find a definition (or new entry) that may be added to the lexicon. There are basically two ways to contribute: (1) either you suggest a definition by **completing our contact form**; or (2) by **registering** as a contributor and **following our guidelines** for entering definitions in our **WordPress CMS environment**.

CREDITS

In the first place, the credits for this Lexicon of course go to the authors, for writing the definitions in the first place. These authors and their publications can be found on our **Bibliography** page. We try to follow the **fair-use policy** when quoting their publications. Nevertheless, if you find we have quoted one of your publications too extensively, please do not hesitate to **contact** us.

This website is developed and maintained by **Wout Dillen**, a PhD student at the **Centre for Manuscript Genetics** (University of Antwerp), as a side project of his work on the **ERC** project 'Creative Undoing and Textual Scholarship (CUTS),' that is supervised by Dirk Van Hulle. On 3 September 2014, the Lexicon welcomed its first official contributor: **Frederike Neuber**, a **DixIT fellow** who is based at the **Centre for Information Modelling – Austrian Centre for Digital Humanities** at the **University of Graz**, Austria. We are very grateful for each of her contributions, and hope they will inspire others to contribute to the Lexicon as well.

We would also like to thank **Catherine Nygren** and **Neil Fraistat** for contributing to the Lexicon by finding a source for **Fraistat's** definition of 'contexture', and Vivien Friedrich (**Arthur Schnitzler digital**) for pointing us in the direction of Bodo Plachta's *Editionswissenschaft* and for her help translating some of its concepts into English.

collation

By WoutDLN | 15 February, 2013 | Comments Off |

“Collationner: comparer et noter les différences entre deux états génétiques ou deux versions imprimées d'un texte (Grésillon 1994, 242).

“Kollation (lat. *collatio* 'Zusammentragen') Vergleich von **Texten** verschiedener **Textträger** um Übereinstimmungen und Abweichungen eines Textes zu ermitteln (Plachta 1997, 137).

“Collation. Character-by-character comparison of two or more **texts**. Traditionally, the process by which **editors** isolate patterns of error that indicate **transcriptional** descent, to determine whether one or more texts is a copy made from an earlier and thus more reliable copy. Some twentieth-century editors have used the term to describe the process of visual comparison by which transcriptions, **galleys**, etc. are checked for error. With modern technology, the “compare” function in word-processing software performs this function by coparing the machine-readable **verions** of galleys and **page proofs** against each other (Kline 1998, 270).

Visitors

Exactly ten months ago today (on the 19th of November 2013), the Lexicon was first published online. In that time, the Lexicon has reached over 1750 views.¹ And so far, this month has been one of our best months yet: with 15 days to go, September 2014 is already our 4th best month ever (see Figure 1). It is probably no coincidence that September was also the month in which the Lexicon welcomed its first contributor: Frederike Neuber, a PhD student at the University of Graz.

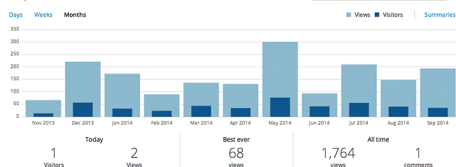

These 1750 views come from a total of 47 countries: Algeria, Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Canada, Egypt, Finland, France, Germany, Greece, Hungary, India, Indonesia, Ireland, Israel, Italy, Jordan, Latvia, Lebanon, Luxembourg, Macao, Mexico, Mongolia, The Netherlands, Norway, The Philippines, Poland, Portugal, The Republic of Korea, Romania, The Russian Federation, Saudi Arabia, Serbia, Singapore, Slovenia, South Africa, Spain, Sri Lanka, Sweden, Switzerland, Ukraine, The United Arab Emirates, The United Kingdom, and The United States (see Figure 2). As Figure 3 shows, over a quarter of these 'hits' come from Lexicon terms, which suggests that many of our visitors actually consult the Lexicon.²

¹: As Figure 1 shows, these statistics date from the 15th of September 2014, 4 days before they were presented at the Digital Showcase of the 2014 SHARP conference in Antwerp.

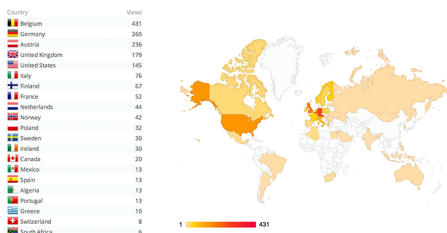

²: To nuance these results further, it should be mentioned that Figure 3 does not distinguish between 'Home Page' hits and 'Archive' hits. This means that in this statistic, whenever someone starts browsing the Lexicon's archive, those page views add to the total of 'Home page / Archives' category, while they should actually add to the Lexicon category. At the moment, WordPress does not provide the option to nuance that category further.

ZOTERO

The **bibliography** of our **Lexicon** can also be consulted on **Zotero**, via the public group: **Lexicon of Scholarly Editing** (https://www.zotero.org/groups/lexicon_of_scholarly_editing). This group also features a 'To-Do List' collection with scholarly text that should still be scanned for definitions. Feel free to suggest texts that need to be added to the 'To-Do List' (either via Zotero or via **e-mail**), or to tackle one of the texts in the list yourself.
